

Safety is for life.™

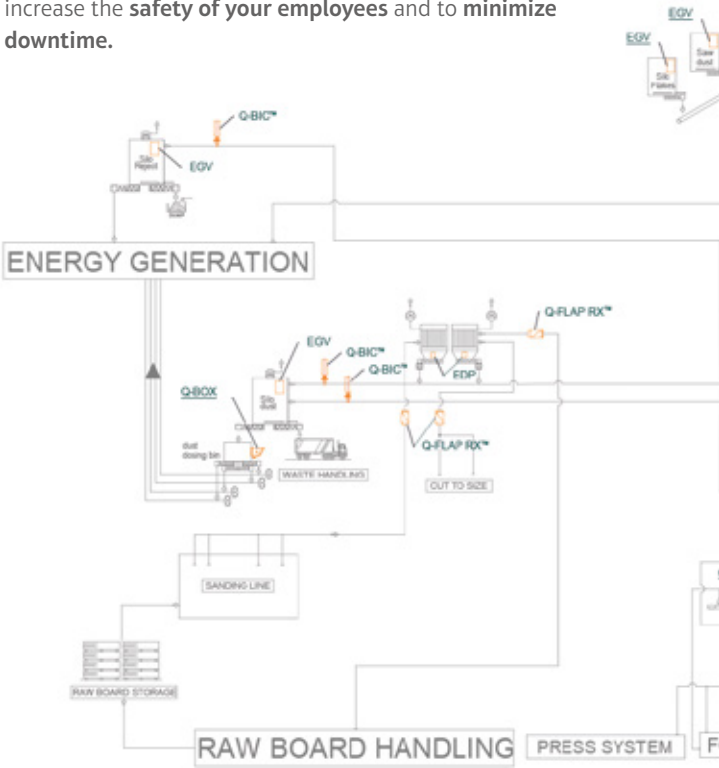

EXPLOSION SAFETY FOR WOODHANDLING FACILITIES

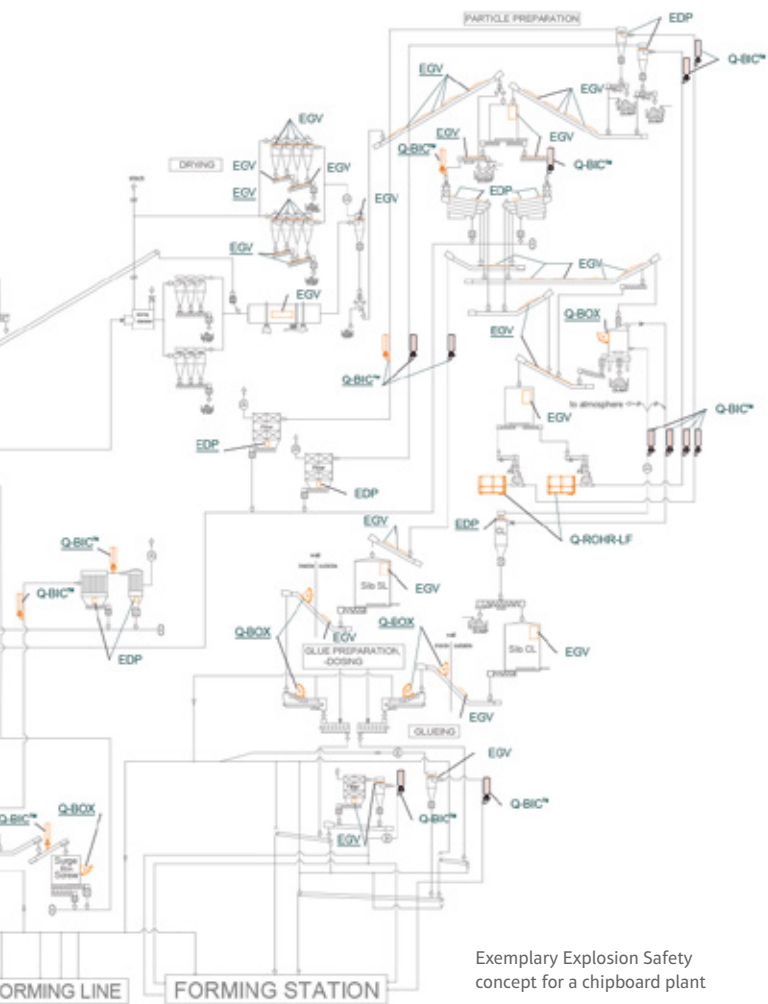

Consulting. Engineering. Products. Service.

Wood processing without dust generation is nearly impossible. This is why at the end of the day the **risk of dust explosions** need to be carefully considered. Explosion events of the past have proven the fatal consequences in case of insufficient Explosion Safety.

REMBE® has set itself the goal of preventing such catastrophes in future. Whether you handle or produce **pellets, wood chips, particle boards, MDF or OSB** or you operate a **sawmill**: We offer to inspect your plant and to develop together with you a comprehensive, economical explosion safety concept to increase the **safety of your employees** and to **minimize downtime**.

Following our guiding principle **Consulting. Engineering. Products. Service.** we are by your side – 365 days a year, worldwide and in all aspects of Explosion Safety.
